YOUR AMAZING BODY

Your body is an intricate and wonderful weave of systems. Take care of it!

- When you were born, you had around 213-217 bones, or even up to 350. However, as you grew into an adult, you ended up with only 206 bones, because many of them fused together. More than half of these 206 bones are found in your hands and feet.
- The average human has about 10,000 taste buds — however, they're not all on the tongue. Some are under the tongue; some are on the inside of the cheeks; some are on the roof of the mouth. Some can even be found on the lips — these are especially sensitive to salt.
- The average human eyelash lives about 150 days.
- It takes about 20 seconds for a red blood cell to circle the whole body.
- The average human scalp contains between 120,000 and 150,000 strands of hair.
- The average human body has 14 to 18 square feet of skin.
- The average human body holds enough: sulfur to kill all the fleas on an average dog, potassium to fire a toy cannon, carbon to make 900 pencils, fat to make 7 bars of soap, 10 gallons of water, and phosphorous to make 2,200 match heads.
